Profile Summary

- Strong base in **classical ML**, **deep learning**, and domain projects in **healthcare, finance, and vision**.
- Built end-to-end **ML pipelines** for **data processing**, model training, and **evaluation**.
- Skilled in **Python**, **PyTorch**, and **Scikit-learn** through hands-on work in **ECG** and **Federated Learning**.

Experience

Caprae Capital - ML Engineer Intern

Apr 2025 – Present

- Built backend **data pipelines** to support **ML logic** and **automated decision** systems across services.
- Created **feature-ready structures**, designed matrices for **multi-tenant model inputs** and analytics logic.
- Led team building **email scoring models** and improved conversion by **targeting** user-level engagement signals.

Mente Consultancies - Data Scientist Intern

Jul 2024 – Feb 2025

- Created **statistical features** and **time-series inputs** to improve **model training** for attrition models.
- Built **Calendar & Rebase Marts** in SAS to **normalize model inputs** and remove seasonality biases.
- Generated **dashboards** and tracked **drift metrics** to monitor and improve overall ML pipeline performance.

Cognus Technology - SWE Intern

May 2023 – Aug 2023

- Worked on **Flutter app development** and **user onboarding**, applying UI logic to optimize form-based input collection.
- Conducted **user research** to analyze gaps and improve workflows for onboarding systems in production.
- Collaborated in **feature releases** by managing documentation and supporting **integration testing** with developers.

Projects

ECG-Lense: PTB-XL ECG Classification | *Python, TensorFlow, CNN, ECG, PTB-XL Dataset* | [IEEE](#) | [GitHub](#)

- Built a deep learning pipeline using **CNNs** for **multi-label ECG classification** on the PTB-XL dataset.
- Preprocessed 12-lead signals and applied **waveform-based modeling** for diagnostic pattern extraction.
- Achieved strong performance on unseen data; published results in an **IEEE conference paper**.

Federated Learning for Loan Risk | *Python, PySyft, Sklearn, Federated Learning* | [Post](#)

- Simulated **federated learning** on **loan risk datasets** using PySyft to mimic real bank data partitions.
- Trained models on distributed nodes while preserving **data privacy** and reducing central exposure.
- Compared performance vs. centralized models to validate use-case for privacy-sensitive deployments.

Doc Theme Explorer | *Python, OpenRouter, ChromaDB, Streamlit, PostgreSQL* | [GitHub](#)

- Developed a full-stack **RAG-powered document assistant** with **LLM query support** and OCR-based ingestion.
- Used **ChromaDB + OpenRouter** to embed, search, and query semantic document chunks in real time.
- Built an **interactive Streamlit UI** for uploading, exploring, and querying PDF/image-based document knowledge.

Education

Sir Padampat Singhania University

B.Tech - CSE(AI-ML) - CGPA: 8.8

Aug 2020 - Apr 2024

Udaipur, Rajasthan

Skills

Languages: Python, SQL, Bash, C++, JavaScript

Technical Skills: Deep Learning, Machine Learning, Pandas, Numpy, Scikit-learn, PyTorch, Prompt Engineering, LLMs, Data Pipelines, Streamlit, Langchain, ChromaDB, FastAPI

MLOps/DevOps Tools: Docker, GitHub Actions, MLflow, Railway, PostgreSQL, CI/CD

Soft Skills: Problem Solving, Team Collaboration, Critical Thinking, Attention to Detail, Self-Learning, Research-Oriented

Achievements

- Achieved **5-star** in Python on **HackerRank**, solved **400+ problems** on LeetCode.
- Published paper on **ECG classification** with DL models in **IEEE Xplore Conference**.
- Earned **Google GenAI Fundamentals** badge from **Google Cloud SkillBoost** platform.
- Built and deployed full-stack **LangChain app** during hands-on **LLM Workshop**.
- Self-hosted **portfolio + projects** using **AWS EC2**, Linux, cron, and Railway setup.
